DETAILED ACTION

Election/Restrictions

1. This application is in condition for allowance except for the presence of claims 17-35 directed to different inventions non-elected without traverse (Response To Restriction Requirement filed 4/21/2008). Accordingly, claim 17-35 have been cancelled.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

- Cancel claims 17-35.

Remarks

3. In view of amendments and Applicant's arguments, the Examiner withdraws the objection to the drawings, the rejection to claims 1-8 and 13-15 with McClintock's reference. Therefore, all the standing claims are in a condition for allowance. The addition of claims 36-45 has been acknowledged.

Allowable Subject Matter

4. Claims 1-16 and 36-45 are allowed.

5. The following is a statement of reasons for the indication of allowable subject matter:

Art Unit: 2834

Regarding claim 1, the prior art of record does not show an inductive energy harvester that generates electrical energy from mechanical vibrations as described in claim 1 comprising a mechanical connector that mechanically couples the magnetic field source to the induction coil support in a manner that allows relative oscillatory movement between the magnetic field source and the induction coil in response to the vibrations while the coil support maintains the position of the coil near the first pole.

Regarding claims 36 and 38, the prior art of record does not show an inductive energy harvester that generates electrical energy from mechanical vibrations as described in claims 36 and 38 comprising a mechanical connector that mechanically couples the magnetic field source to the induction coil support in a manner that allows relative movement between the magnetic field source and the induction coil in response to the vibrations; a flux yoke attached to the second pole of the magnetic field source to provide a low reluctance flux path between the first and second poles of the magnetic field source.

Regarding claim 40, the prior art of record does not show an inductive energy harvester that generates electrical energy from mechanical vibrations as described in claim 40 comprising a mechanical connector that mechanically couples the magnetic field source to the induction coil support in a manner that allows relative movement between the magnetic field source and the induction coil in response to the vibrations; a second magnetic field source arranged in magnetic flux opposition to the magnetic field source; and a magnetic flux concentrator positioned between the magnetic field source and the second magnetic field source and in the vicinity of the induction coil.
